Perfected Metal Cutting Circular Saw Serves Fabricators ~ Emergency Services

Centennial, CO. 5, 9, 2006

Industrial Metal Cutting Circular Saw Has Beveling Capability and Laser Guide

SteelMax has introduced a 9" metal cutting circular saw that cuts metal cool and clean without burring, heat distortion or sparking. Designed for mild steel, stainless and aluminum, the model S9 cuts faster, cleaner, safer and more affordably than other metal cutting equipment. With unmatched performance, steel is cut as easily as plywood. Featuring a 45-degree beveling capability, the powerful 15-amp motor operates at 2700 rotations per minute. Blades are TCT carbide design and can replace the Jaws of Life to remove auto roofs in seconds, cut through bars on windows or make long straight cuts in heavy structural steel, I beams, stainless and aluminum.

It is suited for a wide variety of metal cutting applications, including tubing, pipe, floor grating, angle iron, plate steel to 1/2" depth and corrugated metal roofing. An efficient blade cover collects virtually all chips and sparks. A retracting blade guard not only protects the blade from damage, but also serves as a safety feature for users. Weighing only 20 pounds, other features include a 25mm arbor bore, 9" blade diameter, blade Laser Guide and an adjustable depth of cut up to 3-1/4". The S9 saw is sold complete with eye and ear protection, carrying case, mild steel blade and edge guide.

The SteelMax S9 is the latest in "Profit Making Tools for Metal" from the people that developed and perfected this technology.
