### For Immediate Release

## Professional 14" Metal Cutter Guarantees Cool / Clean Cut - Ready To Weld

*Centennial, CO. 5, 1, 2006*

### Professional Industrial Metal Cutting Saw Has Mitering Capability and Quick Pipe Vise

SteelMax LLC has introduced a 14" metal cutting saw that cuts metal cool and clean without burring, heat distortion or sparking. Designed for cutting mild steel, stainless and aluminum, the model S14 cuts faster, cleaner, safer and more affordably than other metal cutting equipment. With unmatched performance, steel profiles are cut as easily as plywood. The S14 features 45-degree mitering capability and a powerful 15-amp motor operating at 1400 RPM's. Blades are TCT carbide design and are superior to abrasive wheel saws. According to Gerry Zack, Vice President of Marketing Services, "the S14 saw cuts without dust, heat, sparks or burrs, making it one of the safest high performance metal saws available anywhere."

It is suited for a wide variety of metal cutting applications, including tubing, pipe, angle iron, and heavy gage plate steel to 4-3/4" depth. With a cast iron base, the S14 is designed to last in industrial environments. Other features include a 25mm arbor bore, 14" blade diameter, a two position vise and quick clamp and quick pipe vise". The S14 saw is sold complete with eye and ear protection, carrying case and mild steel blade.

The SteelMax S14 is the latest in "Profit Making Tools for Metal" from the people that developed and perfected this technology.
